LearnEV+ and CarTechIQ Announce a Joint Venture to Revolutionize AI-Driven Diagnostic Assistance for Repairing Heavy Duty and Off-Highway Vehicles

Lexington, KY, and Wylie, TX, 11/21/2024. LearnEV+ and CarTechIQ have launched a new joint venture, GlobalTechIQ, Inc., to bring cutting-edge artificial intelligence (AI) diagnostic technology to repair shops and technicians specializing in heavy-duty and off-highway vehicles. Operating under the name HeavyDutyIQ, this collaboration aims to transform the diagnostic and repair process by providing AI-powered assistance that offers fast, accurate, and vehicle-specific repair recommendations.

The AI system ingests industry-wide repair information from heavy-duty OEM sources, tier 1 suppliers, and many other experienced base information providers, allowing the AI diagnostic assistant to provide vehicle-specific, highest-probability repair recommendations based on symptoms or diagnostic trouble codes. This empowers technicians and shop managers to make faster, better-informed diagnostic decisions. AI diagnostic assistance has been shown to improve shop efficiency and technician productivity by increasing diagnostic accuracy and decreasing diagnostic time.

“Repair shops face increasing complexity in diagnostics, electrical system repairs, and efficient troubleshooting are some of the key challenges faced by HD technicians and repair facilities today. Adding focused AI repair assistance technology to the diagnosis and repair process will drastically reduce diagnostic time and non-productive bay time by having AI-driven probable repair solutions available for the technician, said John J. Stoeckinger,” CEO of LearnEV+.

“Keeping up with ever-changing systems technology on today’s vehicles is a challenge for all repair shops. In the passenger car and light duty market, our AI assistance technology provides probability-ranked repair recommendations with fast cycle times. We expect to offer similar results in the heavy-duty and off-road markets.” said Dean Ricciardulli, CEO of CarTechIQ Inc.

About LearnEV+

Learn EV, Inc. is an E-commerce training platform that educates technicians in the electric vehicles space. Using virtual and augmented reality headsets to support the platform. Learn EV, Inc. leverages the assets and industry expertise of “Independent Truck Repair Group” (iTRG) to accelerate the Platform.

About CarTechIQ

CarTechIQ is a leading innovator in AI-powered automotive service and support. By using specialized AI and open large language models, CarTechIQ equips technicians and software providers with advanced tools for efficient, informed decision-making. The company’s mission is

to transform the transportation industry by providing unparalleled guidance and cutting-edge technology.
